PROJECTS

- **Bank Management System** (Developed in 2022):
  Developed a project based on Python-MySQL connectivity that performs essential functions that a real bank performs, such as entering, displaying, or changing the details of various bank accounts, depositing money into or withdrawing money from bank accounts, and being aware of all the customer information.

- **Movie Recommendation System** (Developed in 2023):
  Developed a cosine similarity-based movie recommendation system based on content or data set. Uses content-based filtering for discrete characteristics of an item to recommend additional items with similar properties. That aims to anticipate or filter preferences based on user choices.

- **Sentiment Analysis** (Developed in 2023):
  Developed a robust project that leverages web scraping techniques and sentiment analysis algorithms to extract and analyze customer reviews from e-commerce websites. By harnessing the power of data, businesses can gain a deeper understanding of customer sentiments, identify strengths and weaknesses in their products, and make data-driven decisions to enhance customer satisfaction and loyalty.

- **Responsive Portfolio Website** (Developed in 2024):
  Developed a responsive personal portfolio website using HTML CSS &JavaScript with smooth scrolling in each section.
